

SlateTool v3.41 Release Notes

- Includes the N4 version of the Niagara AX tool
 - Niagara is the core Tridium software platform used for SLATE wiresheet development.
 - The previous platform version, Niagara AX 3.8.38 (N3), has reached end-of-life and will (is) no longer be supported by Tridium.
 - This SLATE AX tool upgrade will also enable future SLATE tool enhancements such as importing module configurations and network setpoints from an installed SLATE system.
 - Stations are now stored in c:\users\%UserAccount%\Niagara4.10\tridium\stations; individual applications (devices) are now located under c:\users\%UserAccount%\Niagara4.10\tridium\stations\%StationName%\shared\%ApplicationName%
 - License file location is now C:\SLATETools\Niagara\Niagara-4.10.5.14\security\licenses .
Note: first time starting the SlateAx tool takes a while depending on what other processes are running and the speed of the computer
- This release includes a migration tool that will migrate Niagara 3.8.38 web projects, stations and user libraries at install time or after installation to the N4 platform. Refer to the **SLATETools 3.8.38 to N4 Migration** document for more details

Includes the changes in the 2.23 and 2.41 Release:

- Supports Slate Firmware release 3.33
- Fixed issues with stale data when using the Annunciator and Limit Wizards in the AX tool
- Improved Modbus resequencing feature
- Improved import for language files
- Fixed issue with multi-line language string import
- Added feature that shows resources used in a wiresheet application. Results can be found in file SlateFBData.txt after building wiresheet in the AX Tool
- Fixed issue allowing duplicate IDs for BACnet Network Visibility
- Fixed issue where the Module Selection page sometimes would not launch
- Fix Limit wizard to correctly show new R and S types of TC when setting up an Input
- Fixed issues that occurred at times starting Slate web editor
- Fixes error message displayed while installing: "This action is only valid for products installed"
- Improved error message regarding corrupted SLATE directory
- Includes the latest web editor with additional widgets and improvements. See Web editor V1.2.26 release notes for details
